

Anonymous Tim3

Hello guys I'm Arman ...from **Anonymous tim3** YouTube channel so today we are going to attack router in Termux and test vulnerability of it

----- **Routersploit in termux** -----

Installation and testing with termux.

----- **Hacking router from Routersploit** -----

Routersploit, guys routersploit is nothing but a router penetration tool (hacker), from this tool you can hack Router and you can modify the router settings. But guys Routersploit is not for hacking mobile hotspot/wifi. Many people says that you can hack wifi from Termux and from Nethunter or Kali linux in Android but guys that's not possible because you need external wifi adapter so nearly it's not possible but. Wait i know you guys are thinking about cost of external wifi adapter's, yes the cost of adapter's are bit costly. But the Routersploit doesn't need any external wifi adapter so you can easily use it in Termux so come on let's know about installation of Routersploit in Termux.

Before heading towards installation process you need to know these things.

1. Make sure your battery charge is 80% if not then please charge it.
2. Clear all background running applications else termux.
3. Enough data/internet like 500MB and a good speed.
4. Patience, yes patience play's main role.
5. 1GB of internal storage.

noob hackers

so after following all steps you can follow below steps.

1. Now, download oneclick installation script from below link and cut and paste it from Download folder to direct internal storage of your device.

https://drive.google.com/file/d/10vPa09-M0Vy_PZH6L0c0Z-qBQHncA4Hv/view?usp=drivesdk

2. Now, open Termux and apply this commands step by step

```
$ termux-setup-storage
```

```
$ ls
```

```
$ cd /sdcard
```

```
$ ls
```

```
$ cp oneclickrs.sh $HOME
```

```
$ ls
```

Now, after that open new session and apply this commands

```
$ ls  
$ sh oneclickrs.sh
```

Now, make sure that you turned your mobile internet connection on after that the installation of all dependencies and Routersploit will start. The installation process can take more than 20 minutes it depend's upon your internet's speed so wait for it to install ok.

After, all installation complete's now you can see the script is opened by itself.

Now, here you need to get connected with the wifi which is running through the Router if there's no router then installation of Routersploit doesn't make sence ... But if you have Router then you can install Routersploit. But before that you need to download Fing application from google play store after downloading it follow below steps.

Now, exit from Termux and open it and apply this comamnd step by step.

```
$ ls  
$ cd routersploit  
$ ls  
$ python3 rsf.py
```

Now, the script opens now apply these commands step by step in it.

use scanners/autopwn

set target (your router ip)

In the place of Router ip you need to paste your Router ip to get router ip just open Fing application and click on Devices and now here you can see your Router name just click on that and after that just scroll down and now here you can see Network details in that just long click on IP Address and copie it to clipboard after that just come back to Termux and paste IP in the place of Router IP

ex:- set target 192.168.0.8

After that follow below steps.

noob hackers

set http_port 80

run

Now, here the vulnerability testing process starts. It takes some time so wait for it after the test completes you can see the vulnerability list. After getting vulnerability list just copy any one of them and follow below steps

use (your vulnerability text)

set target (your router IP)

run

Now, this one is also take some of your time to complete so wait for it to complete after that. Now you can see admin panel or WiFi passwords of router and even you can hack id and password's of all user which are connected to same router and even you can do MITM from that so that's all about Routersploit and it's uses and installation of it in Termux so i hope you guy's liked it.

noob hackers

I hope this worked if yes then please share this PDF and channel with others. Bye have a awesome day :)
